

Did you know?

- Each home fueled by a central propane distribution system effectively offsets 8.5 tons of carbon emissions per year, equivalent to the annual emissions from one vehicle.
- A recent American Gas Association study showed that 69% of new homes in the U.S. feature gas heat, and a distinct majority of homeowners prefer having gas energy in their homes.
- The ability to offer homeowners dual-fuels significantly increases the marketability of a community; HBH Gas Systems gives you the opportunity to bring gas to your off-grid development. In qualified developments, systems can be planned, engineered, and installed all at no cost to the developer.

What's the Bottom Line?

Homeowners demand dual-fuels.

You want to give homeowners what they want.

HBH gives you that option.

Project Highlight: Montesororo

Montesororo is a 3,140 acre private residential community located outside of Borrego, California in the heart of the Anza-Borrego State Park, less than two hours northeast of San Diego. Residents enjoy an 18-hole Tom Fazio golf course as well as hiking, mountain biking, horseback riding, and off-roading in the 600,000 acres of surrounding protected state park land.

At final buildout, Montesororo will consist of about 800 homes in addition to spa, golf, and other recreational facilities. The entire community will be fueled by economical propane gas from an HBH Gas System.

To read more about Montesororo or any of our recent news, visit the News & Updates page at www.hbhsystems.com.

HBH & Sustainable Development

The unique quality and capabilities of an HBH Gas System make it the ideal energy delivery model for sustainable development in the new millennium. Propane offers lower greenhouse gas emissions than other fuels without compromising performance in a wide range of applications. Our Central Gas Distribution Systems contribute to strengthening the three pillars of sustainable development:

1. The Economy, by boosting productivity and providing increased savings
2. Social Welfare, by improving living standards through increased comfort and convenience
3. The Environment, by replacing electric power in off-grid homes

News & Upcoming Events

Harris Baker, President of HBH Gas Systems, will be speaking at the Land Development Breakthroughs Conference in Phoenix, AZ November 14, 2007

Who We Are

HBH Gas Systems specializes in the marketing, design, and implementation of fully-engineered Central Gas Distribution Systems. Each system allows all the homes in the community to be supplied with propane from a single facility, eliminating the need for individual tanks.

The gas is distributed, metered, serviced and billed just like natural gas. Central gas distribution systems provide developments with the economic convenience and efficiency of an environmentally responsible gas product endorsed by the EPA as an alternative green fuel.

HBH Gas Systems facilitates the centralized delivery of gas to new home customers nationwide through a strategic partnership with Ferrellgas, the nation's 2nd largest propane retailer and 17th largest energy company .
